

New Technology with Oil Pump Lubrication and Protection

HEAVY DUTY PREMIUM AIR COMPRESSOR

THE BEST COMBINATION OF PROFESSIONAL AND UNIQUE DESIGN - ENFORCED CLEAN LUBRICATION MECHANISM

Special oil carried crankshaft :

Ensure the sufficient clean lubrication.

Built-in enforced lubrication :

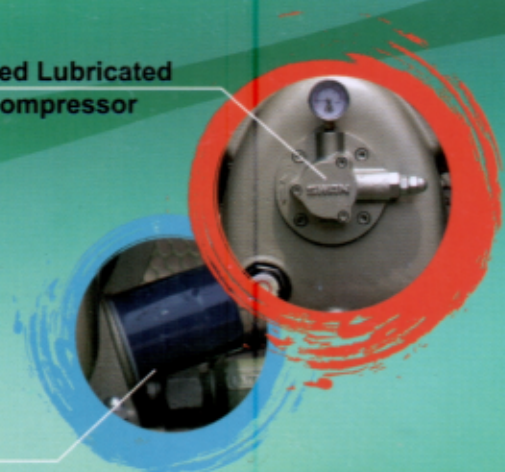

Simple but effective lube system ensures full lubrication without fail.

Long-lasting oil filter and oil capillary pipe :

Ensure the supply of clean oil.

Enforced Lubricated Bare Compressor

Long Lasting Oil Filtering System

THE BEST COMBINATION OF EXCELLENT QUALITY AND CUSTOMER ORIENTED - AUTOMATIC / UNLOADING DUAL CONTROL SYSTEM

Unloading Start / Stop minimized the weariness of moving parts :
increase the working life of compressor and motor.

Alternative choice :

dual control system offer the end user's option depending usage condition.

Oil pressure protection mechanism :

Simple maintenance and easy operation lead to the customer's satisfaction.

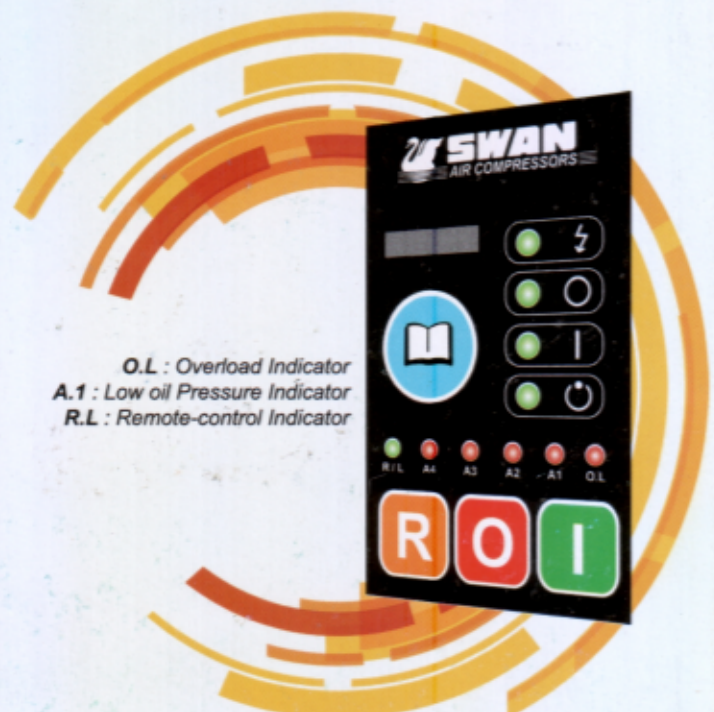

The distinctive and high efficient design enable to eliminate wearing damages to all mechanical parts during ON / OFF and loading / unloading operations.

The friendly self - diagnosis control system will monitor exactly the running conditions of the remote compressors.

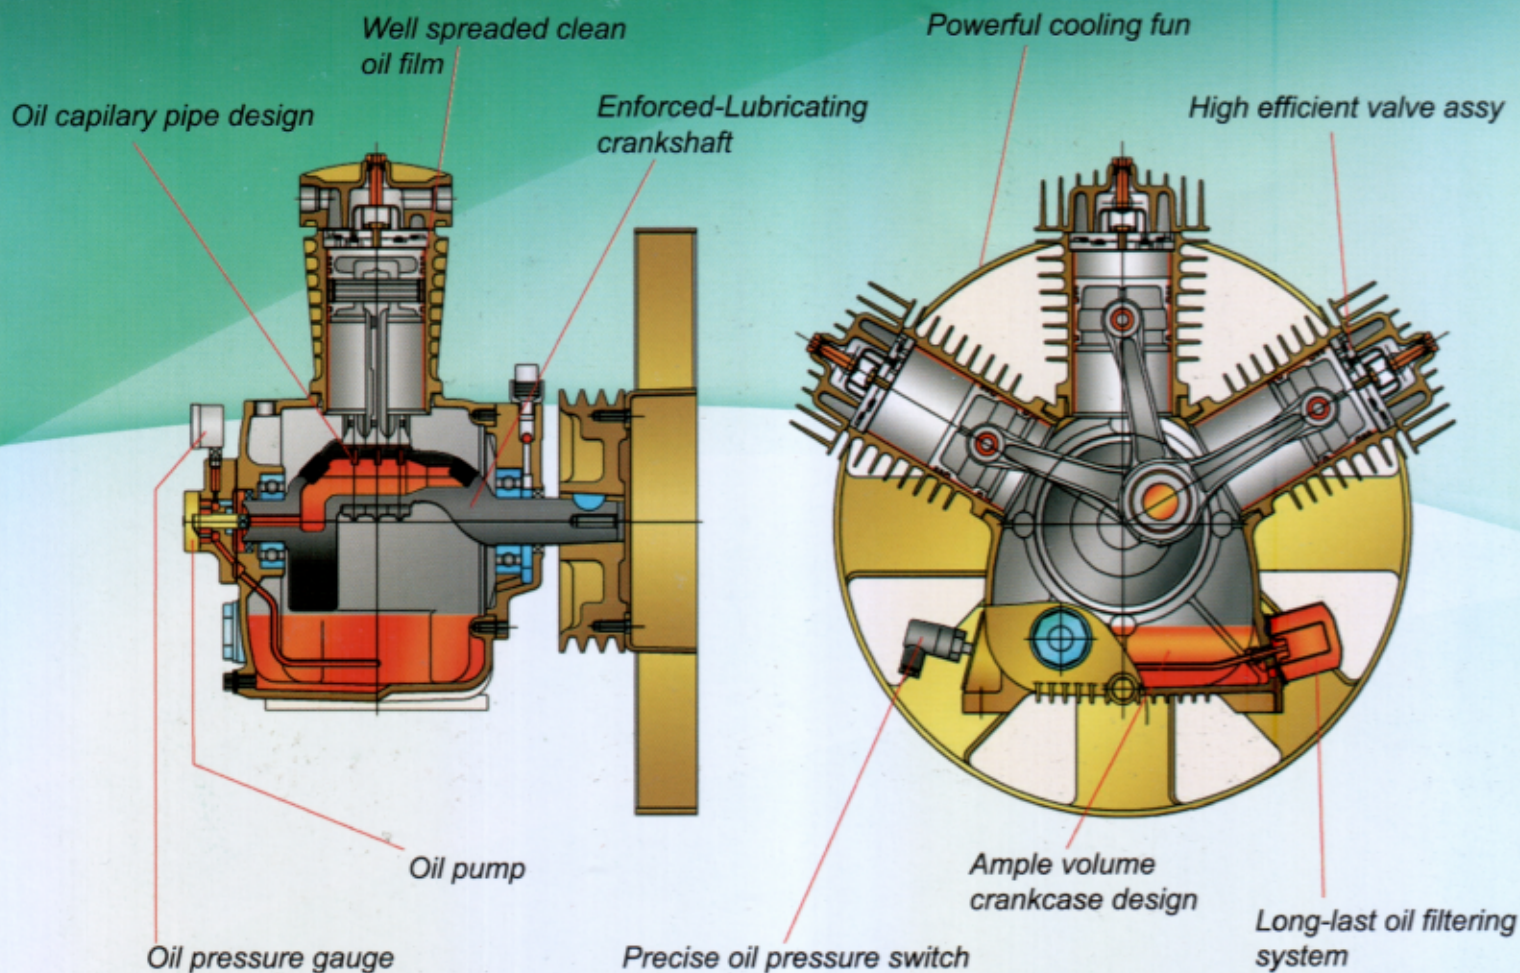

Intelligent control system, be able to self - adjust the air discharge quantity flexibly due to different air consumption.

Up to five protective systems and antimate design to completely meet customer's requirements.

Simple and visible indicator light : user friendly

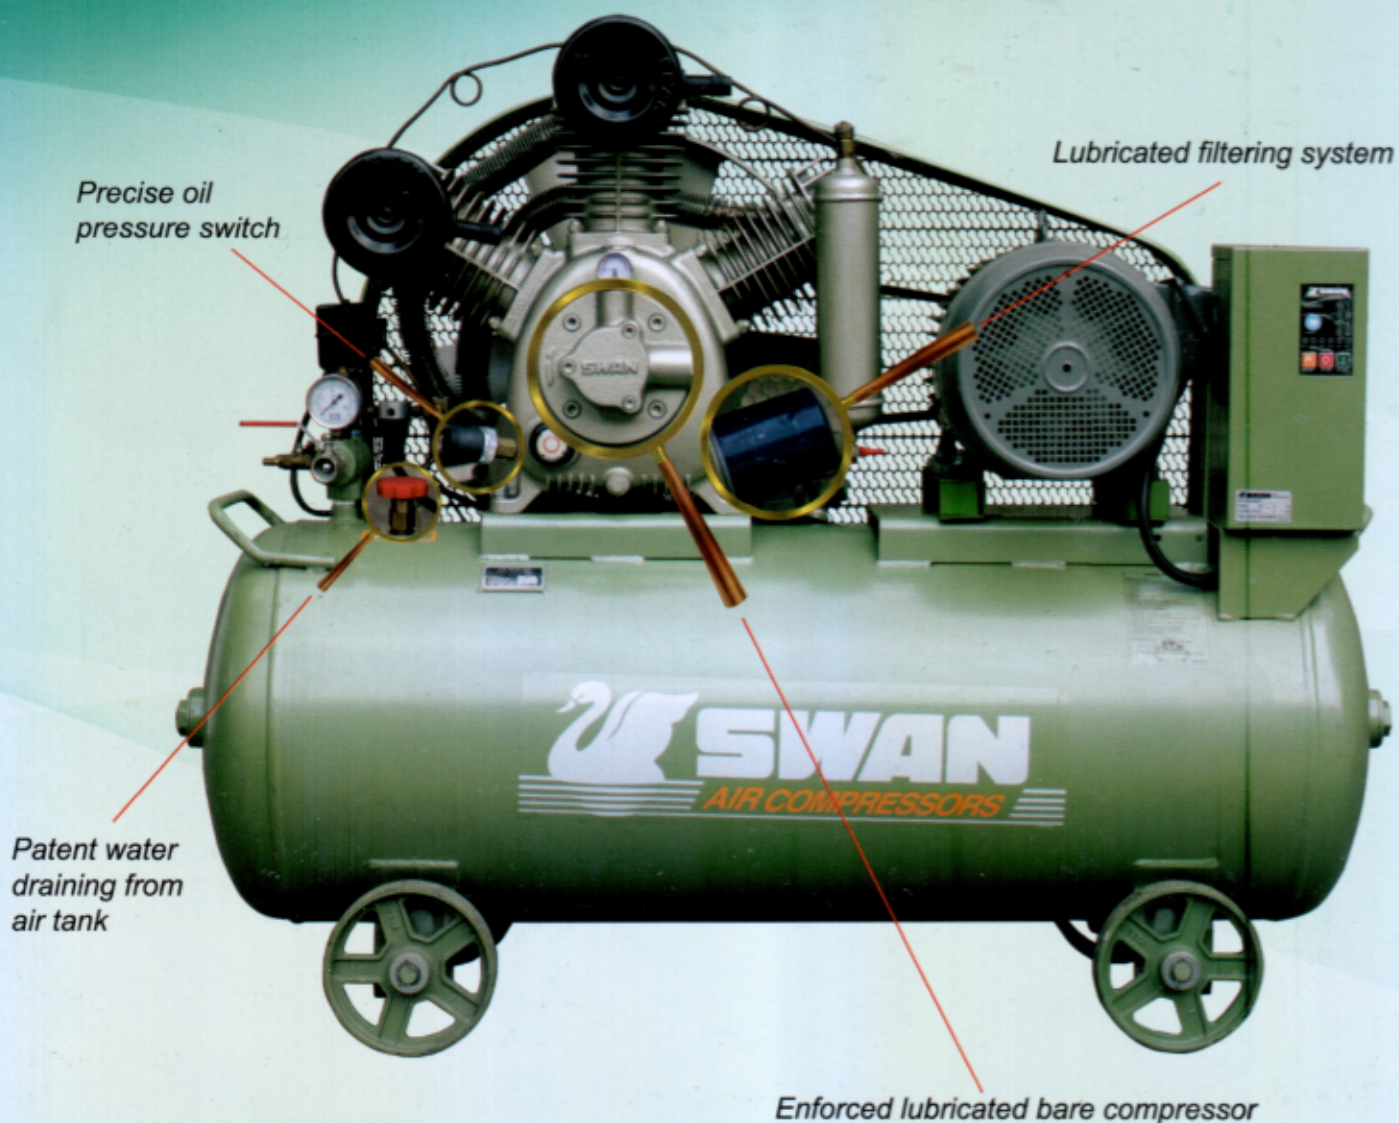

ENFORCED LUBRICATING AIR COMPRESSORS

24 HOURS CONTINUOUS RUNNING

The series of products are able to execute **24 hours** continuous running with start / stop frequently, and heavy loading.

LONG SERVICE LIFE

Excellent cooling air circulation system will guarantee long-lasting operation of air compressors. The unique structure design of Swan bare compressors with enlarged fan and good heat dissipation material enable to achieve the goal.

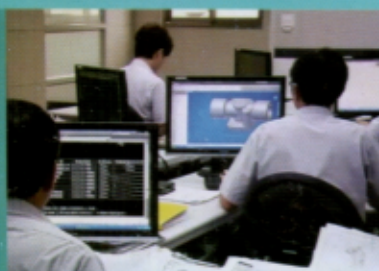

QUALITY, ADVANCE TECHNOLOGY PROFESSIONAL

High quality and consistent components are maintained through the use of **Numerically Controlled Machine Centers** which typically are capable of completing a finished parts in a single setting process.

High efficient and durable valve assemblies are guaranteed through the use of special material treatments and high precision grinding processes.

All metal surfaces on compressors units are prepared by initially shot blasting, followed by the application of powder coating to ensure you of a bright, durable and environmentally friendly surface protection.

Product quality is guaranteed through the application of modern technology such as CAD / CAM which is used in all functions from product development, modelling and design, right through to the manufacturing process.
